DESCRIPTION

The TSI Bravo ST solution secures **AC loads** at **230 Vac** from a **24 Vdc** infrastructure.

Additional **AC input** is used under normal conditions to achieve an overall **conversion efficiency** of 95.5%. In the event of a grid failure, it **automatically switches** to the DC to secure the loads.

In addition to this, this solution includes a **bypass** that feeds AC loads directly from the grid if there is a problem in the system.

The modules included are hot swappable for **ease** of **maintenance**.

APPLICATIONS

All business critical applications and all types of AC loads. The solution is design for highest AC output availability. Both inverter modules and by-pass are hot-swappable which ensures low Mean Time to Repair (MTTR), reduction in service costs.

MAIN FEATURES

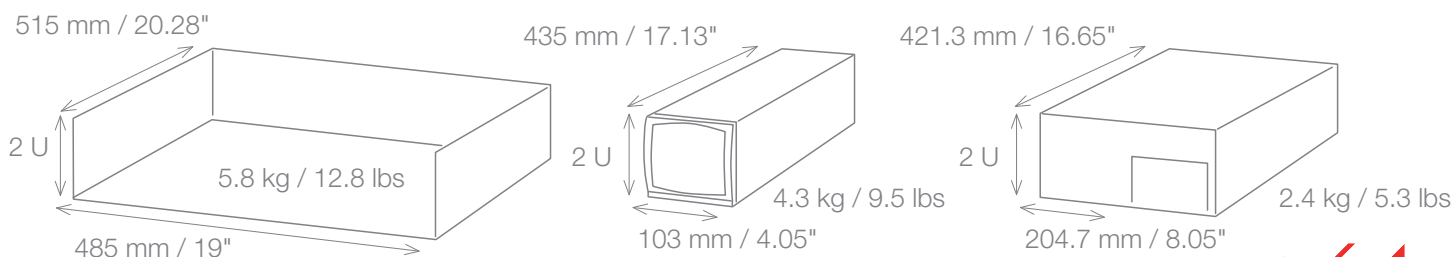

- » Extra AC input for increased efficiency
- » Integrated bypass
- » Compact solution (2U high)
- » Modularity (from 1.5 to 3 kVA)
